

React (Day-10)

Different ways to work CSS in our react projects:-

- All styles in index.css
- SASS & LESS (Syntactically Awesome Style Sheets)
 - ↳ Advanced CSS (Not recommended when app scales)
- Styled Components → (Very common & very popular)
 - ↳ (AKA stay used in Uber)

We have Libraries (CSS)

- Material UI (MUI) → (They export pre-styled components)
 - ↳ by Google
- Bootstrap
 - ↳ by Twitter
- Chakra UI
- Ant Design

But we will use Tailwind CSS in our project.

Configure Tailwind CSS with your project :-

i) Create Project

- > mkdir my-project
- > cd my-project
- > npm init -y
- > npm install -D parcel
- > mkdir src
- > touch src/index.html

ii) Configure template path.
put "*" in content

iii) Add Tailwind directives in CSS

ii) Install Tailwind CSS

> npm install -D tailwindcss postcss

> npx tailwindcss -init

iii) Config PostCSS

create .postcssrc in root directory & copy past this

```
{
  "plugins": [
    "tailwindcss": {}
  ]
}
```
